DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary.

Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35

Art Unit: 1732

U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Talley, Jr et al (U.S. Patent 6,767,498 B1), Wagner et al (U.S. Patent 6,838,043 B1) or Dugan et al (U.S. Patent Application Publication 2003/0062658 A1).

Talley, Jr. et al (see the entire document, in particular, col. 14, lines 29-41; col. 16, lines 18-23; col. 16, line 60 to col. 17, line 11), Wagner et al (see the entire document, in particular, col. 1, lines 18-36; col. 2, lines 24-36) and Dugan et al (see the entire document, in particular, paragraph [0063]) teach a process of making a fabric from yarns, fibers or filaments as claimed, except that none of these references explicitly teaches compressing a fabric to a density of at least 10% of a density of a first polymer, which would have obvious to one of ordinary skill in the art at the time the invention was made in the process of any one of these references principally in order to manufacture a desired fabric (e.g., ensure bonding of the yarns, fibers or filaments which form the fabric).
